PCI-DSS background:

The Payment Card Industry Data Security Standard (PCI-DSS) was created by major credit card companies to safeguard customer information. Visa, MasterCard, American Express, Discover, and JCB mandate that merchants and merchant service providers meet certain minimum standards of security when they store, process, or transmit cardholder data.

PCI-DSS 1.0 debuted in 2004. Updated standards with increased security requirements have been regularly released since. The current standard is PCI-DSS 3.1 with the TLS 1.2 security update required.

The Butte Center for the Performing Arts, Inc. is PCI-DSS 3.1 / TLS 1.2 compliant.
